

Quality Policy

RME Civil Excavations aims to create a framework and environment for its excavation and civil contracting projects which will support the initiative of quality in every aspect of work, including safety and the environment.

Through a well-managed and responsible quality control system, the focus will be on:

- "Doing the job once and getting it right"
- Improving performance and reducing costs in every aspect of the project.

At every stage through our quality system we will ensure that our customers needs and expectations are met.

The responsibility of quality lies with every employee and subcontractor who work for RME Civil. To achieve this RME, with suggestions and input from our customers, employees and subcontractors, audit and meet on a regular basis to continually improve the effectiveness of this system.

Any changes in the direction of our quality objectives, or improvements to the system will be communicated to all employees and contractors through either site specific inductions, site meetings or staff training.

Customers and other interested parties will be communicated any changes, to our quality system, on a project basis.
